

NON SLIP

FATIGUE MATTING

IDEAL FOR AROUND MACHINERY • POOLS • GYM'S • CHANGEROOMS • UTE TRAYS

Anti-fatigue mats are manufactured to absorb impact and rebound, thereby reducing leg pressures and strains. They also provide a non-slip surface making them ideal to keep your work area safe and incident free.

Our fatigue matting is a black profiled rubber that is 7mm thick and comes in a 10m roll that is 1830mm wide. The matting is specifically designed with drain holes and a studded back to allow for air and water flow, that makes it ideal for use around wet area's and in ute trays.
